Legend

{NAME}

Placeholder -- usually replaced with an ID or other identifier of a RESTful object.

<NAME>

Not an actual endpoint, but the HTTP method to use.

NAME/?

Dynamically evaluated endpoint; no further information can be determined without request-specific details.

*

This endpoint is a `default` handler, and is therefore free to interpret path arguments dynamically; no further information can be determined without request-specific details.

...

This endpoint is a `lookup` handler, and is therefore free to interpret path arguments dynamically; no further information can be determined without request-specific details.
